Full-Stack Developer

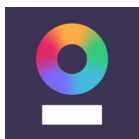

São Paulo, Brazil.

SUMMARY

I'm a Full Stack Developer focused on building performant and scalable applications. I currently work at the Mais Correios e-commerce platform, developing solutions with VTEX. I have a solid background in the Front-end ecosystem, with experience in TypeScript, Next.js, React, automated testing with Jest and Cypress, styling with Tailwind CSS, and integrations with Firebase and Supabase. On the Back-end, I've worked with Node.js, NestJS, PostgreSQL, Prisma, and Docker. Today, my focus is on evolving in the Back-end, diving deeper into Java and more robust architectures. I enjoy writing clean code, building good abstractions, and thinking about solutions that are easy to maintain and scale over time.

EXPERIENCE

InfraCommerce - Full-Stack Developer

October 2024 - Present / Remote

I worked on the development and maintenance of an endless shelf platform (Omnichannel), serving brands such as Dior and Guerlain. The project featured a complete admin panel with invoice generation, product and user registration, and sales management. I worked with a robust stack: TypeScript, Next.js, NestJS, MySQL, Docker, RabbitMQ, and JWT authentication, within a Multi Tenant architecture. After a few months, I was promoted to a new squad as a Back-end developer, taking ownership of the Mais Correios project – an e-commerce platform built with VTEX IO, where I maintain Node.js services and React applications.

Origin9 - Full-Stack Developer

November 2023 - December 2024 / Remote.

I worked on feature development for an education platform using React.js, Node.js, PostgreSQL, and Sequelize. I built modules such as school meal management, teacher and class registration, permission-based user control, and PDF transcript generation. I also implemented an integration with the OpenAI API to generate customized lesson plans for teachers. Additionally, I participated in an inspection project built with React Native, where I developed offline-first sync features. Test coverage was ensured with Cypress for E2E and Jest for unit tests.

YOUDevelop - Front-end Developer

April 2022 - November 2023 / Remote.

I started as an intern and was promoted throughout my time at the company, which operated as a software factory. I worked on diverse projects using Next.js, TypeScript, Styled-Components, Firebase, and Supabase. Among the projects I was involved in: I developed a raffle platform using Next Auth and Firebase; contributed to a survey platform built with Remix, MongoDB, and Amazon S3; and participated in an international project for Germany – a restaurant management platform using Next.js and Firebase.

EDUCATION

PUC Minas

March 2024 - October 2025

Postgraduate Software Engineering

UNIVR

February 2020 - December 2022

Systems Analysis and Development
